Visual Evidence & Attention Heatmaps

Clinical Description & Guidance

Acne is a chronic inflammatory skin condition caused by clogged hair follicles. Rosacea is a chronic condition causing facial redness and visible blood vessels.

First Aid / Actions:	• Wash the affected area gently with a mild, non-comedogenic cleanser twice daily • Apply over-the-counter benzoyl peroxide (2.5–5%) or salicylic acid cream • Use oil-free, non-comedogenic moisturizer and sunscreen (SPF 30+) • Apply a cold compress to reduce redness and inflammation
Dos:	• Keep your hands away from your face • Change pillowcases frequently • Stay hydrated and maintain a balanced diet • Remove makeup before sleeping
Don'ts:	• Do NOT pop, squeeze, or pick at pimples — this causes scarring • Avoid harsh scrubs or exfoliants on inflamed skin • Avoid greasy or oily cosmetics • Do not use multiple acne treatments simultaneously without medical advice

Nutritional & Dietary Guidelines

Recommended Foods:	• Zinc-rich foods (pumpkin seeds, lentils, beef) • Omega-3 fatty acids (salmon, mackerel, flaxseeds, walnuts) • High-fiber foods (oats, broccoli, quinoa) to balance blood sugar • Green tea (contains antioxidant EGCG to reduce sebum production)
Foods to Avoid:	• High-glycemic index carbohydrates (white bread, white rice, sugary cereals) • Cow's milk and dairy products (can stimulate insulin-like growth factors) • Greasy fast foods and foods high in saturated/trans fats • Spicy foods, hot beverages, and alcohol (common rosacea flushing triggers)
